SYNC

Udyam Digital

A mobile-friendly website and WhatsApp journey that takes a small business from one sentence to a booked installation, in its own language.

Team NATPAT · TIET, Patiala

Airtel SYNC 2026 · Digital Track

Demo video (2:58) · Code on GitHub · Architecture and privacy note

Platform Partner unstop

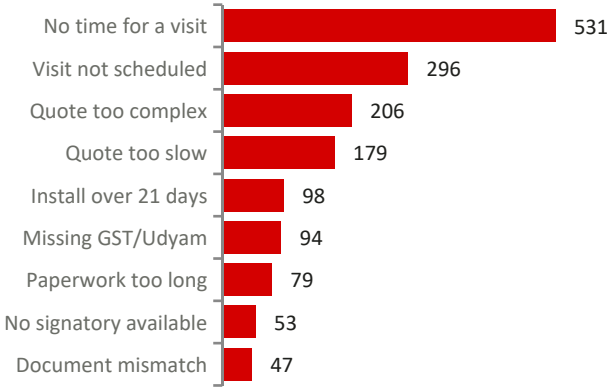

7 in 100 leads activate, and a third of the loss is addressable

One quarter of synthetic SMB leads (Apr–Jun 2026). The steepest drop is from needs assessed to quote accepted.

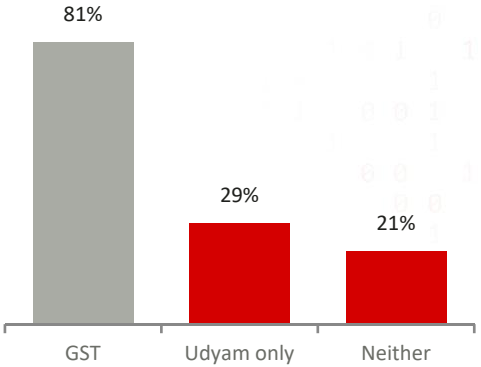

The funnel

Addressable drop reasons: 1,583 leads

Clear KYC after accepting a quote

17.6 days
lead to live; 12.9 of them hand-offs

3 calls
per customer, chasing status

34%
of 4,632 drops (1,583) cite reasons a digital journey can address

3 in 4
owners without GST fail KYC after saying yes

Source: smb_leads.csv (5,000 synthetic leads; 368 activations; ₹55.4 lakh acquisition spend). KYC: has_gstin, has_udyam.

Platform Partner unstop

Today’s buying journeys leave gaps; we close them in one sitting

The three ways a small business buys connectivity today, compared at each step of the journey.

Step	Accel field sales today	Digital-first, single product	Local reseller, many vendors	Udyam Digital
Find the right product	A visit; the executive pitches what is on target	Self-serve, one product at a time	Whatever the shop stocks	**Advisor in 10 languages, web or WhatsApp**
What you can buy	Products sold one at a time	A single product	Pieces from different vendors	**A whole bundle, a reason for every line**
Price	Quote in 3–5 days, PDF with product codes	Instant, for that product	Informal	**Instant monthly price, add-ons to toggle**
Verification	Papers collected in person; 3.8 days	Online sign-up	Varies	**Registry + documents read on the phone: minutes**
Owners without GST	1 in 4 clears KYC	Varies	Varies	**Free Udyam, guided; or Aadhaar e-KYC + shop proof**
Status and support	3 status calls; billed and supported per product	Per product	No single bill or support number	**Dated tracker on WhatsApp; one bill**

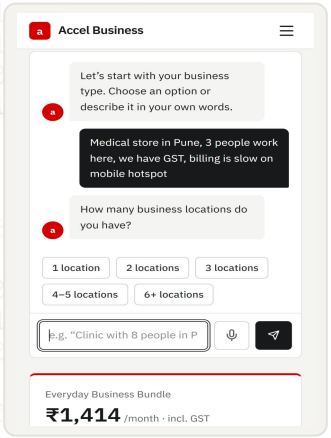

Where we win: the bundle, one bill, the owner’s language, and a route for the 29% of leads with no GSTIN. A partner steps in when software cannot close.

Where they win, and our answer: a single-product sign-up is quicker for one SIM, so owners can drop any extra line from the quote. Resellers own local trust, so we recruit them as paid partners.

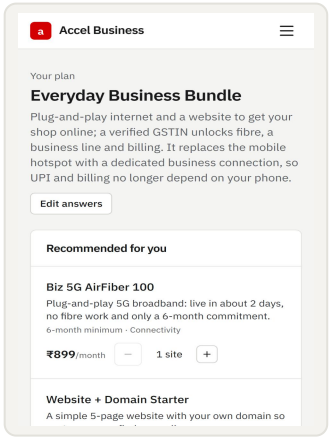

Sources: the case brief and smb_leads.csv. "Varies": not described in the brief, so we make no claim.

One sentence to a booked installation, without an initial sales visit

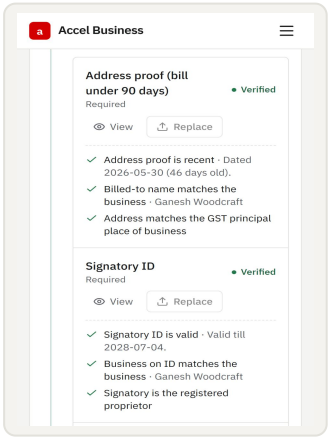

Fixes: visits, slow quotes and status chasing (slide 2). Screens from the working build.

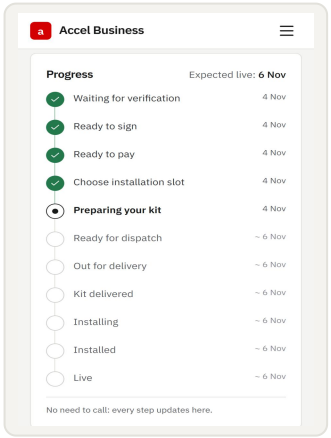

1 Describe the business

3 Verify once

4 Track to go-live

5 Or stay on WhatsApp

Owner BUILT
Web app (React) or WhatsApp, 10 languages

→

API BUILT
Advisor, pricing engine, Smart KYC rules, orders, lead model

→

Data BUILT
MongoDB; private Cloudflare R2 document store

→

Connections BUILT
GST and Udyam registries, Aadhaar e-KYC, UPI, WhatsApp, Claude

The demo runs on the case's synthetic data, with payments in test mode. Full map: supporting PDF, page 2.

Clean applications verified in minutes, including owners with no GST

Fixes: paperwork drops, a 3.8-day KYC stage, and 3 in 4 owners without GST failing KYC (slide 2).

KYC today	**3.8 days**
Automated checks	**Minutes**

Flagged cases: reviewed within 4 hours

1. **Consent**
   one purpose, 30 minutes
2. **Registry lookup**
   GSTIN or Udyam number
3. **Bill and ID read**
   on the phone, ~1.5 s a page
4. **Decision**
   verified, or exactly what to fix

Issues identified in sample applications	Caught	The owner is told
GST registration cancelled	✓	Use an active GSTIN, or Udyam
Certificate photo too blurred	✓	Retake a sharper photo
GSTIN altered or mistyped (2)	✓	The registry's GSTIN
Legal name differs from registry	✓	Fix it, or ask a reviewer
Bill 257 days old (limit 90)	✓	Upload a recent bill
6 clean applicants	✓	**Verified; reused for a year**

Owners without GST

Get Udyam free, guided: details pre-filled; a reminder after a day, a partner's call after three.

Or verify without registering: Aadhaar e-KYC by OTP, plus a bill and a shop licence or shop photo.

Then: everything that does not need GST can be bought.

DPDP by design

- Consent first: one purpose, 30 minutes
- Aadhaar never stored; a typo is caught before any OTP
- Files private; every view audited

Sample applicants K01–K12 (47 images); answer key not shared with teams. Details: supporting PDF, page 3.

Offices and multi-site first; partners and a model take the rest

Priority follows conversion and how fast revenue covers the cost to win. Micro retail stays digital-only.

Segment	Activate	Cost to win	Bundle /mo	Revenue months	Launch offer and channel
1 · Professional offices	11.1%	₹10,695	₹6,796	1.6 mo	Fibre 300, 2 lines, email, backup · self-serve
2 · Small multi-site	11.0%	₹15,614	₹31,233	0.5 mo	Fibre + failover + CCTV per site · digital + partner survey
3 · Small manufacturers	12.8%	₹15,324	₹19,980	0.8 mo	Leased line, firewall, IoT · partner-led, digital KYC
4 · Micro retail	4.1%	₹20,007	₹2,505	8.0 mo	Fibre 100 or 5G AirFiber + POS · WhatsApp only

Revenue months = cost to win ÷ monthly bundle revenue (the pack has no margins), e.g. ₹10,695 ÷ ₹6,796 = 1.6.

Digital advisor: Every segment self-serves; WhatsApp is the cheapest channel (₹4,026 per activation).

Channel partners: Own the live queue: failed payments, KYC help, callbacks. Paid per activation, so they gain.

Field force: Site surveys for multi-site and manufacturers only (₹24,335 per activation).

The lead model

Predicts: how likely a stalled lead is to activate.

Inputs: lead source, segment, city tier, GSTIN, Udyam, team size, sites, spend, current internet.

Result: logistic regression; AUC 0.705 on held-out leads; the top 10% activate at 16% vs 8.1%.

Changes the work: partners call the best leads first, each shown with its reasons.

Fairness: no names, phone numbers or language; city tier only, never the exact city. Checked quarterly by language and city tier.

Source: smb_leads.csv (cost to win = acquisition spend ÷ activations). Model: 3,749 leads to train, 1,251 to test.

Platform Partner unstop

+237 activations a quarter at 39% lower acquisition cost

Base case: same leads and spend; the journey recovers 15% of the 1,583 digitally addressable drops.

Metric	Today	Month 12	Why reachable
Lead-to-activation	7.4%	12%	Recover 15% of addressable drops
Days to activate	17.6	≤ 7	12.9 days of hand-offs removed
Cost to win	₹15,053	≤ ₹9,200	Same spend, more activations
Status calls	3.0	≤ 0.5	Dated tracker and WhatsApp
6-month churn	15.2%	≤ 10%	One-call customers: 5.9%

Rollout

Q1 pilot: offices and retail in 2 tier-1 cities; web, WhatsApp, partners.
Q2–Q3 scale: multi-site; GSTN API, DigiLocker, e-sign, live UPI.
Q4 national: manufacturers with partners; tier-2 cities.

Drops recovered	10%	15% (base)	30%
Activations a quarter	526	**605**	843
Cost to win	₹10,532	**₹9,156**	₹6,571

₹1.96 Cr annualised revenue from one quarter's extra activations (237 × ₹6,900 × 12), before churn. **+43** more if 60% of owners without GST clear KYC (25% today): 190 × 60% × 30/47 = 73, vs 30. About 7 overlap the base case.

Risks and mitigations

Recovery below 15%: even 10% adds 158 activations and cuts cost to win by 30%.
Fraud or poor scans: checksum and registry checks; reviewer below 60% confidence.
Channel conflict: partners are paid on assisted activations.
AI mistakes: the catalogue, not the model, sets products and prices.
DPDP and telecom KYC: consent, audit, erasure built; licensed e-KYC partner.

Scenario on smb_leads.csv: ₹55.4 lakh acquisition spend held constant; 368 activations a quarter today.
